Fishery Statistics of the United States and Alaska are compiled and published annually to make available information on both the economic and biological aspects of the domestic commercial fisheries.

Data on the economic aspects are necessary to persons engaged in the commercial fishery and to governmental agencies concerned with its regulation and protection. Those here given cover the total catch and value by species, the yield and value of manufactured products and byproducts, the employment of men, craft, and gear in the capture of fishery products, employment in shore establishments, and related information.

From the biological standpoint these data are important to sound fishery management in providing detailed information on fluctuations in the commercial catch by species, locality, and year, and on the types of gear and boats operated. They assist conservation agencies so to regulate the commercial fisheries as to produce maximum yields without depletion.

Previous statistical reports on the fishery industries were issued under the Department of the Interior in the Administrative Report series for 1938 and in the Statistical Digest series for succeeding years. Reports for preceding years were issued in the Administrative Report series of the former Bureau of Fisheries.

INTRODUCTION

This report contains a review of the fishery statistics for the year 1944, collected by the Division of Commercial Fisheries during 1945. These include data on the volume of the catch of fishery products and their value, employment in the fisheries, quantity of gear operated, the number of fishing and transporting craft employed in the capture and transporting of fishery products, employment in the wholesale and manufacturing establishments, and the volume and value of the production of manufactured fishery products and byproducts.

Statistical surveys for 1944 data were conducted in all sections except the South Atlantic, Gulf, and Mississippi River States. Statistics on the various fisheries were collected by the following field agents: A. L. Brown, F. Freeland, H. Haberlund, V. E. Heffelfinger, D. A. McKown, C. D. Stewart, C. B. Tendick, R. H. Wilson, J. P. Wharton, and F. M. Wood. The surveys in the New England States were supervised by B. E. Lindgren and those in the Middle Atlantic States by R. T. Whiteleather. Data for the Great Lakes were assembled by the staff of Dr. John Van Oosten of the Division of Fishery Biology. Those on the fisheries of Alaska were collected by the Alaska Division of the Service.

The statistical surveys conducted during 1945, for 1944 data, were under the general direction of E. A. Power, Chief, Fishery Statistical Section, assisted by A. M. Sandberg, Fishery Marketing Specialist. The survey material was assembled, tabulated, and prepared for publication by the staff of the Fishery Statistical Section under the direction of D. Y. Aska, Statistician, assisted by R. L. Busby, Melissa Tinkey, and Virginia Coyne. Katherine L. Howe, artist of the Service, prepared many of the illustrations contained in this report.

In assembling the data on the fisheries, use was made of all records collected by the various State fishery agencies. In the Great Lakes and Pacific Coast States, these records were such that it was only necessary for the Service personnel to conduct partial surveys. Statistics on the freezings and cold-storage holdings of fishery products were furnished by the War Foods Administration, and those on the imports and exports of fishery products by the Bureau of the Census.

Grateful acknowledgement is extended to the State and Federal agencies and to the various individuals who cooperated in furnishing portions of the data contained in this volume.

SECTION 1.- GENERAL REVIEW

The fishing industry showed that it was becoming better adjusted to war-time conditions during 1944. Some fishing vessels that had been requistioned by the Armed Services were returned to fishing. A considerable number of new vessels, built under authorization of the Office of the Coordinator of Fisheries, entered the fishery during 1944, and many more were under construction. The labor shortage continued acute in most areas. The imposition of price ceilings in July 1943 tended to shift the emphasis to species, or to forms of preparation, that were not under price control, or that were under price control but had more advantageous price ceilings. An acute shortage of ice in certain localities caused some loss of production, although the more usual result was an increase in operating costs as ice was shipped in from distant points. The shortage of meat increased the utilization of fish that in more normal times were not used or were used only to a limited extent.

Based upon available statistics for 1944, the total catch of fishery products in the United States and Alaska increased over that of 1943, with a smaller increase in value also being reported. The value of the catch failed to increase in proportion to the volume because price ceilings were in effect on principal species throughout the entire year. These were first imposed in July 1943, and, as a result, prices during the first half of 1943 were considerably higher than during the last half of that year and all of 1944. A comparison of sections surveyed in both years showed an increase in production of 11 percent with an increase in value of 3 percent. The catch, as compared with 1943, increased in the New England, Middle Atlantic, and Pacific Coast States and decreased in the Great Lakes States and in Alaska.

The total catch of fishery products in the United States and Alaska as based on surveys for 1944 in all sections except the South Atlantic and Gulf States, which were last surveyed in 1940, and the Mississippi River and Tributaries, which was last surveyed in 1931, amounted to 4,374,659,000 pounds valued at $193,068,000. However, if 1944 production figures for all areas had been available, it is estimated that they would have shown a total production of 4,504,000,000 pounds valued at $207,000,000. The following table, which contains recorded production for the areas in which surveys were made and estimates for other areas, indicates the trend of the yield and value of the domestic catch during recent years:

Year	Pounds	Value to fishermen
1939	4,443,328,000	$ 96,532,000
1940	4,059,524,000	98,957,000
1941	5,080,341,000	134,172,000
1942	3,876,524,000	170,338,000
1943	4,202,000,000	204,000,000
1944	4,504,000,000	207,000,000

The production of canned fishery products in the United States and Alaska during 1944 amounted to 658,659,598 pounds valued at $152,914,237 and the output of fishery byproducts was valued at $216,212,790. Based on the most recent surveys available, the reported production of fresh and frozen packaged fish and shellfish was 279,502,311 pounds valued at $59,255,821.

New England States.—The New England States, although plagued by continuous shortages of shore help, fishing gear, boat repair parts, and other critical items reported an increase in production of 10 percent as compared with 1943. However, the value of the catch declined 2 percent from the 1943 record. Of the major species, cod, haddock, hake, sea herring, mackeral, and rosefish production showed increases while decreases occurred in the landings of alewives and flounders. The three leading species, in quantity, taken in New England during 1944 were haddock, 133,064,800 pounds; rosefish, 120,215,500 pounds; and cod, 93,755,500 pounds. The three leading species, in value, were haddock, $8,887,270; cod, $5,529,614; and rosefish, $4,581,821.

There were more vessels fishing in 1944 than in 1943, due in part to new vessel construction and in part to the return to fishing of vessels requisitioned by the Armed Services early in the War. The difficulties encountered in operation of the fleet were great, and considerable ingenuity was required to overcome the various handicaps. New fishing gear was scarce. Repair parts for vessels and engines were difficult to obtain when needed. There was considerable dissatisfaction with prices paid under price ceilings. Many restrictions on operations were imposed by naval and military security regulations. Crew members did not feel that they were provided with proper quantities of some foods under the rationing program. Each of these difficulties required thought and planning on the part of the industry in arriving at solutions that enabled them not only to maintain but to increase their production.

Due to the general shortage of protein foods, the demand for fish soared and the catch of some formerly little utilized species increased. As examples, the catch of anglerfish doubled, while that of ocean pout and wolffish each increased by a half million pounds over that of 1943. While these provided a considerable quantity of additional protein food at a time when it was badly needed, they did not affect the total catch to any great degree.

Middle Atlantic States.—During 1944, both the poundage and the value of the catch of fishery products in the Middle Atlantic States exceeded those for any year for which there are records. The catch during 1944 increased 32 percent in quantity and 18 percent in value compared with 1943. The three leading species with respect to volume were menhaden, 304,313,800 pounds; oysters, 13,124,800 pounds of meats; and clams, 11,066,400 pounds of meats. The three leading species, in value, were oysters, $6,492,931; clams, $4,437,804; and menhaden, $2,478,968. The unusually large catch of menhaden accounted for 72 percent of the total production of both fish and shellfish and 77 percent of the total landings of fish. Nearly the entire catch of menhaden was used in the manufacture of oil and meal. The average value for these fish is much less than that for species used primarily for human food. The average price per pound received by the fishermen in this area for fish, exclusive of menhaden, was 7.89 cents per pound in 1944, as against 7.98 cents in 1943.

Among the more important species, the greatest changes in production compared with 1943 were increases of 55 percent for menhaden, 82 percent for mackerel, and 41 percent for clams, and a decrease of 34 percent for whiting. Among the minor varieties whose production was stimulated by the meat shortage, swellfish showed the largest gain. Production of this species was only 61,000 pounds in 1943. In 1944, it increased to 1,637,300 pounds. The price of surf clams showed a gain of more than 100 percent although the total production did not increase materially. Prior to 1944, surf clams were used locally for bait. During this year, New England firms found difficulty in obtaining supplies for the production of canned clam chowder and minced clams in their vicinity. To maintain production, they imported surf clams from Long Island which increased the demand and price for this item.

The hurricane which swept this section of the coast in mid-September destroyed approximately 90 percent of the pound stakes and nets. Considerable damage was done to wharves and other shore installations, and a few fishing vessels were lost at their moorings. Hurricane warnings had been given in time to prevent a greater loss. Other lesser storms occurred in November, cutting production still further.

Chesapeake Bay States.—Production of fishery products in the Chesapeake Bay States during 1944 increased 32 percent in volume and 97 percent in value as compared with 1942 when the most recent previous survey was made. The total catch of fish and shellfish for 1944 amounted to 267,390,600 pounds valued at $19,823,242. The three leading species of fish with respect to volume were menhaden, 77,969,900 pounds; croaker, 38,220,800 pounds; and alewives, 21,344,600 pounds. The leading species of fish with respect to value were croaker, $2,017,732; striped bass, $687,265; and shad, $640,613. The three leading items of shellfish were oysters, 29,847,000 pounds of meats, valued at $9,060,080; hard crabs, 41,083,900 pounds, valued at $2,143,351; and soft crabs, 3,534,600 pounds, valued at $1,003,471.

Nearly the entire catch of menhaden was used in the manufacture of oil and meal. The value per pound for this species is much lower than the average for other fishery products. Menhaden constituted 30 percent by weight of the landings of both fish and shellfish, or 41 percent by weight of the landings of fish, yet it only made up 2 percent of the value of fish and shellfish, or 7 percent of the value of fish landed. Shellfish accounted for 29 percent of the volume of catch and 64 percent of the value.

The labor and ice shortages combined to force producers in the area to make many changes in their normal operating procedures in order to keep production at a high level. Oyster shucking and crab picking plants were hit especially hard by the labor shortage as they used more labor than other types of plants. The ice shortage affected the operations of the crab picking plants and the shippers of fresh fish but had little effect on the oyster shucking plants as the colder weather during the oyster season reduced the demand for ice. To offset these shortages, the record-breaking demand for fishery products enabled producers to concentrate on maintaining production since sales required little effort. In many instances, the biggest sales problem was that of allocating available production so that customers were kept satisfied.

South Atlantic and Gulf States.—No general canvass of the fishing industry was made in the South Atlantic and Gulf States for 1944. The last survey was made in 1940. Data obtained in the canned fishery products and byproducts survey indicate a decline in the production of canned shrimp and canned oysters during 1944. This decline in the pack of shrimp was caused by a diversion of shrimp to the fresh and frozen market, caused by the shortage of help and the imposition of price ceilings, rather than by a decline in the production of shrimp.

The catch of menhaden in the South Atlantic and Gulf States during 1944 amounted to 303,626,000 pounds as compared with the 1943 catch of 331,600,000 pounds.

Pacific Coast States.—In probably no other section of the country except Alaska was the fishing industry more affected by the operational difficulties resulting from the war, yet the industry increased its production over that of the previous year. Aided by favorable weather and better than average runs of fish, the volume of the catch increased 15 percent and the value 7 percent compared with 1943. The 1944 production of 1,675,793,700 pounds, valued at $61,101,692 was the largest since 1941 and showed that the fishing industry was recuperating from the initial shock of wartime conditions. The three leading species with respect to volume were pilchard, 1,147,295,200 pounds; tuna, 167,136,200 pounds; and mackerel, 83,656,700 pounds. The leading species from the standpoint of value, were tuna, $19,636,911, pilchard, $12,718,133; and sharks (including grayfish), $6,473,212.

Despite heavy production, a large part of which was canned, supplies available for domestic civilian consumption were below normal and did not begin to satisfy the record-breaking demand. Set-aside orders on canned fish, established by the War Food Administration, required canners to sell approximately 70 percent of the pack of canned salmon and 55 percent of the canned pilchard and mackerel to the Government for military use and lend lease distribution. The War Department, through its Quartermaster Market Centers, purchased large quantities of frozen fish, which further decreased the available supply. As a result of the short supply and brisk demand, the otter-trawl fishery for rockfish was tremendously expanded.

In addition to the military restrictions and demands, the Government took an active and unique interest in the Pacific Coast fisheries through the activities of two wartime agencies, the War Food Administration, which served as the procurement agency for all military and lend-lease purchases of canned fish, and the Office of Coordinator of Fisheries, which in addition to its wartime service to the industry with respect to priorities, etc., administered the California pilchard fishery and the Pacific Halibut Allocation program. Under the pilchard order, the local Area Coordinator was authorized to license vessels and assign them to specific ports to insure an orderly distribution of fish with the aim of keeping all plants operating at near capacity so as to assure the maximum output of canned pilchard by eliminating gluts in one area while shortages were hampering production in another area. The halibut program was designed to regulate and allocate the catch of halibut to insure orderly marketing of the valuable halibut fishery.

Great Lakes States.—During 1944, the commercial catch of fish by United States fishermen in the Great Lakes and the International Lakes of Northern Minnesota decreased 3 percent in weight from that of the preceding year while the value declined 8 percent. The total catch by United States fishermen in these waters in 1944 amounted to 75,687,800 pounds valued at $10,948,195. In addition, Canadian fishermen took 27,126,200 pounds from these waters. Of the United States production, the three leading species by weight were lake herring, 16,801,000 pounds; blue pike, 14,989,300 pounds; and lake trout, 10,604,000 pounds. The three leading species by value were lake trout, $3,791,868; blue pike, $1,565,475; and whitefish, $1,211,982. The bulk of the United States production came from Lake Erie, Lake Michigan, and Lake Superior.

The catch of lake herring was approximately a million pounds smaller than in 1943, making it the smallest catch of this species since 1933. However, the yield of blue pike was over 3-½ million pounds higher than in 1943, and was the largest catch of these fish since 1936.

The fishing industry in the Great Lakes was beset by many of the same problems that hampered production in other sections of the country. Man-power shortages and scarcity of nets, rope, and repair parts for vessels and engines, were among the most serious problems to be overcome in maintaining successful operations. Demand, both in the civilian market and by the Army, for frozen fish was high throughout the year.

Mississippi River and tributaries.—The most recent complete statistics on the catch in the Mississippi River and its tributaries are those for 1931. Data obtained in the 1944 survey of the production of fishery byproducts showed that there was an increase in the value of the production of fresh-water mussel-shell buttons compared with 1943.

Alaska.—The 1944 production of fish and shellfish in Alaska registered a decrease of 6 percent in quantity and 1 percent in value compared with 1943. This decrease was primarily due to smaller catches of pink and red salmon during 1944. The catch of herring increased and was the largest since 1941.

Due to its geographical position, and the traditional method of operation of Alaskan fisheries which necessitates the transportation of men and supplies to Alaska for the fishing season, Alaska probably felt the effects of the War more than any other section. The salmon cannery industry operated under a concentration order issued by the Office of the Coordinator of Fisheries. This concentration plan, which also was in effect during 1943, concentrated operations in the largest and most efficient plants, thus allowing maximum production with available manpower, limited supplies, and shipping facilities. The Concentration Order allowed the operation of 89 out of a total of 119 plants.

1/ DATA ARE NOT AVAILABLE ON THE QUANTITY AND VALUE OF THE CATCH BY TYPES OF GEAR IN ALASKA. HOWEVER, THE TOTAL CATCH HAS BEEN ALLOCATED TO THE VARIOUS GEAR THROUGH ESTIMATES. THE CATCH OF ALL TRAPS IN ALASKA HAS BEEN CREDITED TO POUND NETS.

2/ INCLUDES THE CATCH BY TRAMMEL NETS.

3/ INCLUDES THE CATCH BY CAST NETS AND DIP NETS IN NEW JERSEY.

4/ INCLUDES THE CATCH BY COQUINA SCOOPS.

5/ THE CATCH BY RAKES, DREDGES, AND BY HAND, IS INCLUDED WITH TONGS.

MANUFACTURED FISHERY PRODUCTS

The output of manufactured products (canned, cured, packaged, and byproducts) in the United States and Alaska during the most recent years for which these data are available was valued at $289,717,873. Of this amount, canned products accounted for 53 percent; byproducts, 22 percent; packaged fish, 14 percent; packaged shellfish, 6 percent; smoked fish, 3 percent; and salt, pickled, and dried fish, 2 percent.

Since general statistical surveys were not conducted in all areas of the United States for 1944 data, the following compilation of manufactured fishery products consists of composite data, based on the most recent statistics available. Data on the production of canned products and byproducts are for 1944 and cover all sections of the United States and Alaska. Data on packaged fish also are for 1944 and are complete, except for California. Information on the production of cured products and packaged shellfish is for 1944 in Alaska and for 1940 in all other sections except the Mississippi River which is for 1931. If complete data for 1944 had been available on the production of cured products and packaged shellfish, the value would undoubtedly be considerably higher.

THE LIME AND POULTRY FEED MANUFACTURED FROM SHELL PRODUCTS WAS PRODUCED FROM OYSTER AND CLAM SHELLS WHICH ARE NOT INCLUDED IN THE CATCH STATISTICS FOR THESE SHELLFISH.

CANNED FISHERY PRODUCTS AND BYPRODUCTS

The output of canned fishery products and byproducts in the United States and Alaska in 1944 was valued at $216,212,790. Of this total value, canned products accounted for $152,914,237, and byproducts, $63,298,553. This represents an increase of 8 percent in value for canned products and of 7 percent in value of byproducts as compared with 1943.

During 1944, fishery products were canned in 325 establishments, 5 more than in 1943. The combined output of these plants amounted to 18,520,653 standard cases or 658,659,598 pounds, an increase of 6 percent from the net weight of the previous year. Three items, salmon, 246,655,056 pounds; sardines, 225,918,603 pounds; and tuna, 70,185,231 pounds, account for 82 percent of the total by weight.

Fishery byproducts were processed in 343 plants during 1944, 16 more than in 1943. Marine animal oil, $31,008,781, and marine animal scrap and meal, $15,243,022, accounted for 73 percent of the production by value.

Canned fishery products and byproducts were prepared in 25 states and Alaska during 1944. California ranked first in value of products, accounting for 39 percent of the total, and Alaska was second with 25 percent.

During 1944, all canned production was subject to tin conservation controls issued by the War Production Board. This prevented the canning of certain specialty products, set quotas on production of certain other products, and allowed the use of only certain sizes of cans. Most of the important canned fishery products had unlimited quotas, so the only effect of the order on those products was to channel production into one or two standard sizes. Most specialty products and animal foods either could not be canned or had a limited quota.

FROZEN FISH TRADE

FISH FROZEN

A total of 266,537,022 pounds of fishery products were frozen during 1944 by domestic freezing plants that reported their activities to the government. Compared with 1943, this represented an increase of 8 percent, and was nearly 20 million pounds more than had been frozen in the United States and Alaska in any previous year.

In 1944, 85 percent of the freezings consisted of salt-water fish, 6 percent fresh-water fish, and 9 percent shellfish. Seven items accounted for 55 percent of the poundage frozen. These were rosefish fillets, which accounted for 10 percent of the total; whiting, 10 percent; mackerel, 9 percent; halibut, 8 percent; cod fillets, 7 percent; shrimp, 6 percent; and haddock fillets, 5 percent. Important changes in the freezings of major species compared with 1943 were increases of 150 percent for cod fillets, 92 percent for haddock fillets, 50 percent for mackerel, 32 percent for halibut, and a decrease of 22 percent for whiting.

According to geographical sections, the New England States again led all other sections in the freezings of fishery products accounting for 45 percent of the total. The Pacific Coast States ranked second with 27 percent of the total.

The bulk of the production occurred between May and October inclusive, with the largest monthly freezings occurring in June, July, and August.

The demand for frozen fishery products, particularly for the more popular items, such as rosefish fillets, haddock fillets, and shrimp, was far greater than the supply. Freezing and cold storage plants were unable to expand their facilities since most items needed for cold storage expansion were practically unobtainable. Many plants also reported that their wage ceiling was lower than that paid in other industries and they were unable to obtain sufficient labor to operate at capacity.

COLD-STORAGE HOLDINGS OF CURED FISH

During 1944, monthly cold-storage holdings of cured herring average 12,453,000 pounds, while those of mild-cured salmon averaged 1,341,000 pounds. This represents an increase of 3 percent in the average holdings of cured herring and a decrease of 46 percent in average mild-cured salmon stocks compared with 1943. Stocks of cured herring were largest between July and September when holdings were over 18,500,000 pounds. The largest holdings of mild-cured salmon were reported on November 1, when they reached 3,290,364 pounds.

FOREIGN FISHERY TRADE [1]

The foreign trade in fishery products of the United States in 1944 amounted to $114,551,321, of which $78,518,539 represents the value of these products imported for consumption and $36,032,782, the value of exports of domestic fishery products. Compared with the previous year this was an increase of 1 percent in the total trade, 17 percent in imports, and a decrease of 21 percent in exports.

Imports consisted of 339,431,088 pounds of edible fishery products, valued at $53,430,869, and non-edible fishery products valued at $25,087,670. Fishery exports consisted of 112,230,430 pounds of edible products, valued at $31,928,808, and non-edible products valued at $4,103,974.

Import duties levied on fishery products imported during 1943 totaled $4,485,663, an increase of 27 percent as compared with the previous year.

SECTION 2.- NEW ENGLAND FISHERIES

(Area XXII) [2]

The yield of the commercial fisheries of the New England States (Maine, New Hampshire, Massachusetts, Rhode Island, and Connecticut) during 1944 amounted to 713,692,300 pounds, valued at $41,909,648 to the fisherman, representing an increase of 11 percent in volume, but a decrease of 3 percent in value compared with the previous year. The survey in Massachusetts and Rhode Island did not cover the number of fishermen, vessels, boats or the quantity of gear used during 1944. There was an increase in the number of fishermen employed in Maine during 1944 and a decrease in the number employed in New Hampshire and Connecticut.

Canned fishery products, valued at $21,042,926, were packed in 48 plants in the New England States, while 36 plants produced byproducts valued at $4,009,179.

---

[2] *This number was assigned to this area by the North American Council on Fishery Investigations. It should be explained that there are included in this area craft whose principal fishing ports are in the area but at times fish elsewhere. A notable example is the southern trawl fishery which extends into Area XXIV. It should be observed that data on the seed-oyster fishery, such as number of persons engaged, craft and gear employed, and catch, are not included in the statistics of the fishery for market oysters and other species but are included in a foot note to the table showing the catch of the New England States which appears on page 57. For a description of the methods used in collecting and compiling these statistics, and an account of the years for which data have been collected, the reader is referred to Section 11 of this document entitled, "Statistical Survey Procedure".*

LANDINGS AT CERTAIN NEW ENGLAND PORTS[3]

Because of the importance of the ports of Boston, Gloucester, and New Bedford, Mass., and Portland, Maine, as landing points for fishery products, detailed monthly statistics have been collected on these landings and are presented in the following pages.

It should be noted that these figures represent actual landings which have not been converted to round weight, so that the figures are not directly comparable to catch figures shown in the General Review and Sectional Summaries.

[3] *The reader is referred to Section 11 of this document for an account of the years for which surveys of these fisheries have been made.*

VESSEL LANDINGS AT BOSTON, GLOUCESTER, AND PORTLAND

Economic aspect

During 1944, landings of fishery products at Boston, Gloucester, and Portland by vessels of 5 net tons capacity or more, amounted to 357,476,171 pounds as landed, valued at $20,413,582 to the fishermen. This was an increase of 11 percent in volume but a decrease of 9 percent in value compared with 1943. Landings at Gloucester again exceeded those at Boston, although the value of the Boston landings was greater. Gloucester landings amounted to 188,661,349 pounds, valued at $9,096,435; those at Boston totaled 151,761,586 pounds, valued at $10,585,567; while landings at Portland amounted to 17,053,236 pounds, valued at $731,580.

Biological aspect

During 1944, the fishing fleet operating on the fishing banks of the North Atlantic and landing fares at Boston, Gloucester, and Portland, numbered 318 vessels of 5 net tons capacity or greater, as measured by the United States Customs Service. The catch of edible fish landed at the three ports amounted to 357,476,171 pounds. This, however, does not represent the entire catch of these vessels, since they also landed fares at other New England ports, at New York City, and at more southern ports in connection with the southern winter trawl and mackerel fisheries.

Otter trawls of all sizes accounted for 289,725,121 pounds, or 81 percent of the total landings. Purse seines were next in importance, landing 46,161,387 pounds, or 13 percent of the total.

NOTE:--THE "NEW ENGLAND PORTS" ARE BOSTON AND GLOUCESTER, MASSACHUSETTS, AND PORTLAND, MAINE. OTTER TRAWLS ARE CLASSIFIED ACCORDING TO THE SIZE OF THE VESSEL. "SMALL" OTTER TRAWL VESSELS ARE THOSE OF 5 NET TONS TO 50 GROSS TONS CAPACITY; "MEDIUM," 51 GROSS TONS TO 150 GROSS TONS; AND "LARGE," 151 GROSS TONS OR GREATER. THE WEIGHT OF SALTED FISH LANDED HAS BEEN CONVERTED TO THE EQUIVALENT OF FRESH FISH AS LANDED. ONLY LANDINGS BY VESSELS HAVING A CAPACITY OF FIVE NET TONS OR GREATER ARE USED IN THIS TABULATION. "OCCASIONAL" AFTER THE NAME OF A BANK OR AREA INDICATES THAT THE VESSELS CONTRIBUTING TO THE CATCH AS SHOWN FISHED CHIEFLY WITH ANOTHER TYPE OF GEAR. IN SUCH CASES, THE NUMBER OF VESSELS FISHING, THE NUMBER OF TRIPS, AND THE NUMBER OF DAYS ABSENT ARE SHOWN UNDER THE PRINCIPAL TYPE OF GEAR USED. A SINGLE TRIP IS REPORTED FOR EACH VOYAGE. WHEN A VESSEL OPERATES IN TWO OR MORE AREAS DURING A VOYAGE, A FRACTIONAL PART (IN TENTHS) OF THE TRIP IS ALLOTTED TO THE AREAS ON THE BASIS OF THE CATCH REPORTED TAKEN IN EACH AREA.

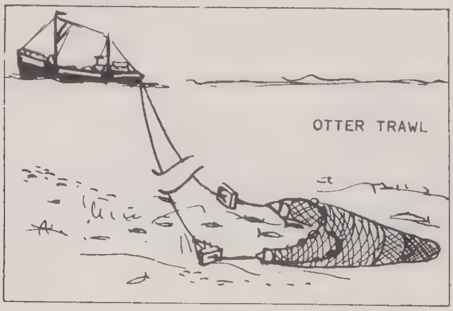
1/ RECEIPTS OF SALT FISH FROM THE TREATY COASTS OF NEWFOUNDLAND, MAGDALEN ISLANDS, AND LABRADOR, WHICH ARE RECEIVED IN THIS COUNTRY AS PRODUCTS OF AMERICAN FISHERIES, HAVE BEEN OMITTED FROM THE LANDINGS FOR THE YEARS FOLLOWING 1941.

2/ INCLUDES LANDINGS AT ATLANTIC AVENUE IN BOSTON. PREVIOUSLY, BOSTON LANDINGS INCLUDED ONLY THOSE SOLD THROUGH THE BOSTON FISH EXCHANGE.

NOTE:--DATA ARE NOT AVAILABLE ON LANDINGS AT PORTLAND PRIOR TO 1916.
DATA FOR THE YEARS FOLLOWING 1935 DO NOT INCLUDE DELIVERIES OF LIVERS, SPAWN OR TONGUES.



BOAT LANDINGS AT BOSTON, GLOUCESTER, AND PORTLAND

Economic aspect

During 1944 landings of fishery products by under-tonnage boats (those of less than 5 net tons capacity) at Boston, Gloucester, and Portland, amounted to 6,328,590 pounds as landed, valued at $325,375. Comparable statistics are not available for previous years. Of the total landings, Gloucester was responsible for 64 percent, Boston for 21 percent, and Portland for 15 percent.

Three species accounted for 63 percent of the total. These were mackerel, 25 percent; cod, 21 percent; and whiting, 17 percent.

LANDINGS AT NEW BEDFORD, MASS.

Economic aspect

The landings of fishery products at New Bedford, Massachusetts, by all sizes of fishing craft during 1943 amounted to 74,935,719 pounds as landed, valued at $6,281,139 to the fishermen. This represents an increase of 21 percent in the volume of the landings and 5 percent in their value, compared with the previous year.

Landings of large haddock outranked all other items in volume and value, accounting for 30 percent of the total landings and 26 percent of the total value. Other items contributing to the major portion of the 1944 landings were yellowtail and blackback flounders, mackerel, and cod. Landings of sea scallops ranked sixth in volume but second in value. Data on the landings of fishery products at New Bedford during 1944 are summarized on the following pages.

There is shown on the following chart the statistical areas and subareas used in reporting the catch landed at the ports of Boston, Gloucester, and New Bedford, Mass., and Portland, Maine.

Biological aspect

The fishing fleet operating on the banks of the North Atlantic and landing fares at New Bedford, Massachusetts during 1944 numbered 290 craft of all sizes. These craft made 3,959 trips during the year, and were absent from port 18,345 days. This was 23 more fishing craft than were reported during 1943. There was an increase of 6 percent in the number of trips and of 4 percent in the days absent from port when compared with the previous year.

1/ EXCLUSIVE OF DUPLICATION. 2/ INCIDENTAL CATCH.

NOTE:--OTTER TRAWLS ARE CLASSIFIED ACCORDING TO THE SIZE OF THE CRAFT. "SMALL" OTTER TRAWL CRAFT ARE THOSE 50 GROSS TONS CAPACITY OR UNDER; "MEDIUM," 51 GROSS TONS TO 150 GROSS TONS. A SINGLE TRIP IS SHOWN FOR EACH VOYAGE. WHEN A CRAFT OPERATES IN TWO OR MORE SUBAREAS DURING A VOYAGE, A FRACTIONAL PART (IN TENTHS) OF THE TRIP IS ALLOTTED TO THE SUBAREAS ON THE BASIS OF THE CATCH REPORTED TAKEN IN EACH SUBAREA. "OCCASIONAL" AFTER THE NAME OF A SUBAREA INDICATE THAT THE CRAFT CONTRIBUTING TO THE CATCH AS SHOWN FISHED CHIEFLY WITH ANOTHER TYPE OF GEAR.

SECTION 3.- MIDDLE ATLANTIC FISHERIES

(Area XXIII) [4]

The yield of the commercial fisheries of the coastal area of the Middle Atlantic States (New York, New Jersey, Pennsylvania, and Delaware) during 1944 amounted to 422,979,600 pounds, valued at $21,329,876 to the fishermen. This represents an increase of 32 percent in volume and 18 percent in value compared with the catch in 1943. These fisheries gave employment to 7,682 fishermen compared with 7,458 in 1943. There were no commercial fisheries prosecuted in the coastal waters of Pennsylvania during 1943 or 1944.

Canned fishery products valued at $1,154,368 were packed in 9 plants in the Middle Atlantic States, while 45 plants produced byproducts, valued at $7,809,717.

---

[4] *This number was assigned to this area by the North American Council on Fishery Investigations. It should be explained that there are included in this area craft whose principal fishing ports are in the area but at times fish elsewhere. A notable example is the southern trawl fishery which extends into Area XXIV. It should be observed that data on the seed-oyster fishery, such as number of persons engaged, craft and gear employed, and catch, are not included in the statistics of the fishery for market oysters and other species but are included in a footnote to the table showing the catch of the Middle Atlantic States which appears on Page 125. For a description of the methods used in collecting and compiling these statistics and an account of the years for which data have been collected, the reader is referred to Section 11 of this document entitled "Statistical Survey Procedure".*

HUDSON RIVER SHAD FISHERY[5]

The shad fishery of the Hudson River in 1944 was responsible for the employment of 533 fishermen, who took 1,192,121 shad, weighing 3,809,400 pounds, with a value of $224,980 to the fishermen. This represented an increase of 6 percent in the number of fish, 18 percent in weight, and a decrease of 37 percent in value as compared with 1943. The average price per pound received by the fishermen in 1944 was 5.9 cents compared with almost 11 cents in 1943.

Stake gill nets accounted for 71 percent of the production by weight; drift gill nets, 28 percent; and haul seines, the remaining one percent.

Statistics of the catch of shad in the Hudson River also are included in the catch data for New York and New Jersey.

HUDSON RIVER SHAD CATCH, *1915 - 1944*

LANDINGS AT NEW YORK CITY

Landings of fishery products at New York City by fishing craft of all sizes during 1944 amounted to 19,142,769 pounds, as landed. This represented a decrease of 13 percent compared with 1943.

Ninety-nine percent of the total consisted of fish and one percent was shellfish. Five species accounted for 80 percent of the total landings. These were haddock with 40 percent; scup (porgy), 15 percent; butterfish, 10 percent; cod, 8 percent; and yellowtail, 7 percent.

DATA COLLECTED BY NEW YORK FISHERY MARKET NEWS SERVICE.

SECTION 4.- CHESAPEAKE FISHERIES

(AREA XXIII)[6]

The yield of the commercial fisheries of the Chesapeake States (Maryland and Virginia) during 1944 amounted to 267,390,600 pounds, valued at $19,823,242 to the fishermen. Comparable statistics for 1943 are not available. Compared with the yield in 1942, the 1944 catch registered an increase of 32 percent in volume and 97 percent in value.

Canned fishery products, valued at $1,374,517, were packed in 19 plants in the Chesapeake States in 1944, while 25 plants produced byproducts valued at $2,407,724.

---

[6] *This number has been assigned to this area by the North American Council on Fishery Investigations. It should be explained that there may be included under this area, craft whose principal fishing ports are in this area but at times fish elsewhere. Data on the operating units and catch of the fisheries of the Chesapeake States have been taken largely from statistics collected by the State fishery agencies of Maryland and Virginia. Supplementary surveys, compilations, and analyses, have been made by agents of this Service in order that the figures may be presented in a manner comparable with those of other sections. It should be observed that data on the seed-oyster fishery, such as number of persons engaged, craft and gear employed, and catch, are not included in the statistics of the fishery for market oysters or other species but are included in a footnote to the table showing the catch of the Chesapeake States, which appears on Page 148. For a description of the methods used in collecting and compiling these statistics and an account of the years for which data have been collected, the reader is referred to Section 11 of this document entitled, "Statistical Survey Procedure".*

POTOMAC RIVER SHAD AND ALEWIFE FISHERY

The catch of shad in the Potomac River in 1944 amounted to 278,180 fish, weighing 883,000 pounds, and valued at $101,490 to the fishermen. The catch of alewives in the Potomac for the same year was 11,864,200 fish, weighing 5,932,100 pounds, and valued at $118,972. Comparable figures covering the 1943 catch are not available. Compared with 1942, the catch of shad shows an increase of 169 percent in volume and 255 percent in value, while alewives show an increase of 162 percent in volume and 226 percent in value.

The 1944 catch of both shad and alewives in the Potomac River was the largest recorded since 1933.

Statistics on the yield of shad and alewives in the Potomac River are also included in the catch data for Maryland and Virginia.

1/ DATA FOR THE TWO STATES NOT ENUMERATED SEPARATELY.

SECTION 5.- SOUTH ATLANTIC AND GULF FISHERIES

(South Atlantic, Area XXIV; Gulf, Area XXV) [8]

The most recent complete fishery statistics for the South Atlantic and Gulf States (North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, and Texas) are those collected for the year 1940. In that year the yield of the commercial fisheries amounted to 575,533,400 pounds, valued at $14,644,895 to the fishermen, representing a decrease of 8 percent in quantity but an increase of 5 percent in value as compared with the catch in 1939. Detailed statistics of these fisheries for 1940 appear in Statistical Digest No. 4, entitled "Fishery Statistics of the United States, 1940". A summary of these fisheries appears in the following tables.

[8] *These numbers were assigned to these areas by the North Atlantic Council on Fishery Investigations. While the catch of fishery products in Lake Okeechobee is included in the Florida catch tables, the catch of the Mississippi River and tributaries does not appear in this section. For a description of the methods used in collecting and compiling these statistics and an account of the years for which data were collected, the reader is referred to Section 11 of this document entitled "Statistical Survey Procedure".*

TARPON SPRINGS SPONGE FISHERY

During 1944, a total of 186,027 pounds of sponges, valued at $2,551,863, were sold on the Exchange at Tarpon Springs, Florida. This was a decrease of 14 percent by weight, but an increase of 11 percent in value as compared with the transactions on the Exchange in 1943.

Sales of sponges on the Exchange during 1944 were as follows: large wool, 25,465 pounds, valued at $578,106; small wool, 39,570 pounds, valued at $637,885; wool rags, 64,323 pounds, valued at $1,045,247; yellow, 12,885 pounds, valued at $99,584; and grass, 43,784 pounds, valued at $191,041. The sales during 1943 were as follows: large wool, 50,050 pounds, valued at $537,776; small wool, 37,044 pounds, valued at $463,914; wool rags, 75,312 pounds, valued at $1,031,382; yellow, 14,817 pounds, valued at $97,123; and grass, 40,132 pounds, valued at $174,884.

Data on the quantity and value of sponges sold outside the Exchange and at other points in Florida during 1944 are not available.

SECTION 6.- PACIFIC COAST FISHERIES [9]

The yield of the commercial fisheries of the Pacific Coast States (Washington, Oregon, and California) during 1944 amounted to 1,675,793,700 pounds, valued at $61,101,692 to the fishermen. This represents an increase of 15 percent in volume and 7 percent in value as compared with 1943. The fisheries gave employment to 25,125 fishermen as compared with 23,108 in 1943. Of the total number of fishermen employed in 1944, 9,254 were employed on vessels, and 15,871 were in the boat and shore fisheries.

Canned products produced in 1944 were valued at $69,108,302 to the processor, and byproducts were valued at $36,200,034. This represents an increase of 21 percent in the value of canned products and 7 percent in the value of byproducts compared with 1943.

---

[9] *Data on the operating units and catch of the fisheries of the Pacific Coast States have been taken largely from statistics collected by the various State agencies. Supplementary surveys, compilations, and analyses, have been made by agents of this Service in order that the figures may be presented in a manner comparable with those of other sections. While statistics on the fisheries of California are for the calendar year, those for Oregon and Washington are for the fiscal year ending March 31, 1944, except that statistics of the halibut fishery for Washington are for the calendar year. For a description of the methods used in collecting and compiling these statistics and an account of the years for which data have been collected, the reader is referred to Section 11 of this document entitled, "Statistical Survey Procedure".*

1/ INCLUDES THE CATCH TAKEN OFF LATIN AMERICA. 2/ THE CATCH OF GRAYFISH IN CALIFORNIA IS INCLUDED WITH OTHER SHARKS.

NOTE:--PRIOR TO 1941, THE POUNDAGE OF HALIBUT, SABLEFISH, LINGCOD, AND ROCKFISHES REPORTED FOR WASHINGTON AND OREGON REPRESENTED THE DRESSED WEIGHT OF THE FISH LANDED. BEGINNING WITH THE DATA FOR 1941, ALL CATCH STATISTICS ARE SHOWN IN ROUND WEIGHTS. THE LANDED WEIGHT OF LINGCOD, SABLEFISH, AND ROCKFISHES (EXCEPT IN THE OTTER TRAWL FISHERIES IN WHICH THE FISH ARE LANDED ROUND) WAS CONVERTED TO ROUND WEIGHT BY MULTIPLYING THE DRESSED WEIGHT BY THE FACTOR 1.43. THE FACTOR USED TO CONVERT HALIBUT FROM MARKETED WEIGHT WAS 1.33. THE POUNDAGE AND VALUE OF THE CATCH SHOWN FOR WASHINGTON AND OREGON INCLUDE 7,752,046 POUNDS OF FISH LIVERS AND VISCERA, VALUED AT $7,170,092 TO THE FISHERMEN. COMPRISING THIS TOTAL WERE: COD LIVERS, 48,508 POUNDS, $3,881; GRAYFISH LIVERS, 5,445,831;POUNDS, $2,428,579; HALIBUT LIVERS, 222,759 POUNDS, VALUED AT $288,536; LINGCOD LIVERS, 410,239 POUNDS, $827,959; RATFISH LIVERS, 364,506 POUNDS, $18,225; ROCKFISH LIVERS, 33,204 POUNDS, $23,292; SABLEFISH LIVERS, 113,892 POUNDS, $172,074; SKATE LIVERS, 7,322 POUNDS, $366; SOUPFIN SHARK LIVERS, 589,567 POUNDS, $3,227,840; AND HALIBUT, LINGCOD, AND SABLEFISH VISCERA, 516,218 POUNDS, $179,340. 1/ CAUGHT ALMOST ENTIRELY FOR THE UTILIZATION OF THE LIVERS IN THE EXTRACTION OF VITAMIN OILS. MOST OF THE CARCASSES WERE DISCARDED.

2/ CAUGHT ONLY ON INDIAN RESERVATIONS.

3/ STATISTICS ON THE CATCH OF SALMON ARE REPORTED TO THE STATE IN NUMBER OF FISH RATHER THAN IN POUNDS. THE FACTORS USED IN THE ABOVE TABLE FOR CONVERTING NUMBER OF FISH TO WEIGHT IN POUNDS WERE AS FOLLOWS: CHINOOK OR KING, 20.0 POUNDS; CHUM OR KETA, 10 POUNDS; PINK, 5.75 POUNDS; RED OR SOCKEYE, 6.5 POUNDS; AND SILVER OR COHO, 10.3 POUNDS.

4/ THE WEIGHT OF CRABS SHOWN IS BASED ON AN AVERAGE OF 22 POUNDS PER DOZEN.

5/ THE STATISTICS ON HARD CLAMS ARE BASED ON YIELDS OF 25 PERCENT OF EDIBLE MEAT.

6/ THE STATISTICS ON OYSTERS ARE BASED ON 18 PERCENT EDIBLE MEATS FOR NATIVE OYSTERS AND 10 PERCENT FOR PACIFIC OYSTERS.

7/ THE WEIGHT OF BAY SCALLOPS IS BASED ON 8.5 POUNDS PER GALLON WHEN SHUCKED.

NOTE:--PRIOR TO 1941 THE POUNDAGE OF HALIBUT, SABLEFISH, LINGCOD, AND ROCKFISHES REPORTED FOR THE PUGET SOUND DISTRICT OF WASHINGTON REPRESENTED THE DRESSED WEIGHT OF THE FISH LANDED. BEGINNING WITH THE DATA FOR 1941 ALL CATCH STATISTICS ARE SHOWN IN ROUND WEIGHTS. THE POUNDAGE AND VALUE OF THE CATCH SHOWN ABOVE INCLUDES THE FOLLOWING ITEMS OF LIVERS AND VISCERA: COD LIVERS, 46,173 POUNDS, VALUE $3,694; GRAYFISH LIVERS, 4,740,482 POUNDS, VALUE $2,085,812; HALIBUT LIVERS, 208,277 POUNDS, VALUE $274,926; LINGCOD LIVERS, 294,069 POUNDS, VALUE $588,138; RATFISH LIVERS, 364,506 POUNDS, VALUE $18,225; ROCKFISH LIVERS, 25,398 POUNDS, VALUE $18,798; SABLEFISH LIVERS, 84,525 POUNDS, VALUE $135,240; SKATE LIVERS, 7,322 POUNDS, VALUE $366; SOUPFIN SHARK LIVERS 357,345 POUNDS, VALUE $1,943,956; AND HALIBUT, LINGCOD AND SABLEFISH VISCERA, 454,705 POUNDS, VALUE $159,146.

LANDINGS BY HALIBUT FLEET AT SEATTLE, WASH.

Landings of fish of all species, except shark, in Seattle by the United States halibut fleet during 1944 amounted to 13,560,763 pounds, valued at $2,144,325 to the fishermen. In addition, a total of 1,571,361 pounds of assorted fish livers and dressed soupfin shark, valued at $2,510,089, was also landed by these vessels. This represents a decrease of 18 percent in poundage and of 35 percent in value compared with 1943. The bulk of the production occurred in June and July.

The halibut season opened April 16, but due to a price dispute, fishing did not begin until May 20. The season for halibut in Area 2 closed on July 9, except for incidental catches, after the shortest season on record. Area 3 remained open until November 30.

A summary of the 1943 landings at Seattle by the United States halibut fleet is contained on the following page. For additional information on the Pacific Coast halibut fishery the reader is referred to Section 10 of this document, entitled "Review of Certain Major Fisheries."

NOTE:--THE HALIBUT FISHING SEASON OPENED APRIL 16, BUT DUE TO A PRICE DISPUTE, VESSELS DID NOT BEGIN FISHING UNTIL MAY 20. THE SEASON ENDED IN AREA 2 ON JULY 9 AND IN AREA 3 ON NOVEMBER 30.

RECEIPTS BY SEATTLE WHOLESALE DEALERS

Fishery products, exclusive of fish livers, received by Seattle wholesale dealers from all sources, except Alaska and British Columbia, during 1944 amounted to 45,797,350 pounds with an average value of 13 cents per pound. This compares with 1943 receipts of 56,038,393 pounds with an average value of 14 cents per pound.

The decrease was primarily due to declines in receipts of sole, salmon, halibut, and lingcod.

A summary of the receipts for 1943 and 1944 is shown in the following tables. Detailed information on these receipts is issued monthly by the Seattle Market News Office of the Fish and Wildlife Service.

1/ PACIFIC OYSTERS WERE INTRODUCED INTO THE PACIFIC COAST STATES FROM JAPAN. THE CATCH OF WESTERN NATIVE OYSTERS HAS NOT BEEN INCLUDED IN THE ABOVE FIGURES.

2/ DATA NOT AVAILABLE ON THE CATCH IN WASHINGTON AND OREGON.

3/ IF THERE WAS A CATCH OF PACIFIC OYSTERS IN THIS YEAR, IT WAS INCLUDED WITH THAT OF WESTERN OR NATIVE OYSTERS.

SECTION 7.- LAKE FISHERIES[10]

In 1944, the yield of the fisheries of the Great Lakes and the International Lakes of Northern Minnesota in the United States and Canada amounted to 102,814,000 pounds, representing a decrease of 2 percent from the catch in the preceding year.

Considering the fishery of United States craft only, the catch amounted to 75,687,800 pounds, valued at $10,948,195 to the fishermen, which was a decrease of 3 percent in volume and 11 percent in value as compared with the 1943 catch.

In 1940, the latest year in which a complete survey was made, the Lake fisheries gave employment to 5,142 fishermen.

---

[10] *The statistics of the catch were obtained principally from records of the various State agencies and from the Dominion Bureau of Statistics, Ottawa, Canada. The data for the operating units (fishermen, vessels, boats, and gear) of the United States, which are for 1940, were obtained largely by agents of this Service in a special survey, although State records in several instances were very helpful in this work. In all cases, the statistics collected are for the calendar year except for Rainy Lake, Lake of the Woods, and Namakan Lake in Minnesota, which are for two seasons; for Lake of the Woods, the seasons are from June 1 to November 1 and December 1 to April 1; and for Rainy and Namaken Lakes the seasons are from May 15 to November 1 and December 1 to April 1. The catches for these two seasons, in the order named, have been combined to constitute a year. The quantity of fish taken in these Lakes between January 1 and April 1 is estimated to be less than 3 percent of the total catch. For a description of the methods used in collecting and compiling these statistics and an account of the years for which data have been collected the reader is referred to Section 11 of this document entitled "Statistical Survey Procedure".*

SECTION 8.- MISSISSIPPI RIVER FISHERIES

The most recent complete catch statistics of the fisheries of the Mississippi River and tributaries are those collected for the year 1931. ("Fishery Industries of the United States, 1932," by R. H. Fiedler, Appendix III to the Report of the Commissioner of Fisheries for the fiscal year 1933.) The yield of fishery products in 1931 amounted to 82,382,523 pounds, valued at $2,897,357, which is a decrease of 22 percent in quantity and 36 percent in value as compared with the quantity and value of the catch in 1922, when the preceding survey was made.

A summary of these fisheries in 1931 was published in the Bureau of Fisheries annual reports entitled "Fishery Industries of the United States," by R. H. Fiedler, for the years 1933 to 1939, inclusive. Information regarding the production of cured fishery products in the Mississippi River area in 1931 and of mussel-shell products and canned fishery products for 1944 appear in the following table.

SECTION 9.- ALASKA FISHERIES [11]

The commercial catch of fishery products in Alaska during 1944 amounted to 561,198,897 pounds, valued at $20,413,525 to the fishermen. This represents a decrease of 6 percent in volume and less than 1 percent in value compared with the catch of 1943. Red and pink salmon showed large decreases when compared with 1943. The yield of both herring and shark showed increases. The Southeast district registered an increase in production over the preceding year, while the other two districts showed declines. The Alaska fisheries gave employment to 24,665 persons during 1944, an increase of 4 percent over the previous year.

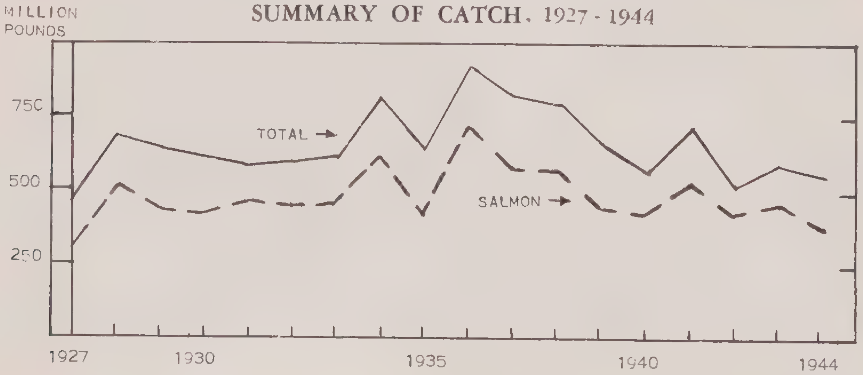
NONE OF THESE CRAFT OPERATED IN 1943. BEGINNING WITH DATA FOR 1944 THE CATCH OF COD TAKEN BY THESE SCHOONERS HAS BEEN CREDITED TO THE WESTERN DISTRICT OF ALASKA.

PRIOR TO 1943 THE ENTIRE CATCH OF HALIBUT, SABLEFISH, LINGCOD, AND ROCKFISHES TAKEN BY UNITED STATES VESSELS IN THE HALIBUT FLEET WHICH LANDED FIFTY PERCENT OR MORE OF THEIR CATCH AT ALASKAN PORTS AND PRINCE RUPERT WAS CREDITED TO ALASKA, EVEN THOUGH A PORTION OF THE CATCH WAS LANDED AT SEATTLE. SIMILARLY THE CATCH CREDITED TO THE PUGET SOUND DISTRICT OF WASHINGTON INCLUDED THE ENTIRE CATCH BY HALIBUT VESSELS WHICH LANDED MORE THAN FIFTY PERCENT OF THEIR CATCH AT SEATTLE EVEN THOUGH A PORTION OF THE FISH TAKEN WERE LANDED AT ALASKAN PORTS AND PRINCE RUPERT. BEGINNING WITH DATA FOR 1943 THE ENTIRE CATCH LANDED BY HALIBUT VESSELS AT ALASKAN PORTS AND PRINCE REPERT HAS BEEN CREDITED TO ALASKA.

SUMMARY OF CATCH, 1927 - 1944



SECTION 10.- REVIEW OF CERTAIN MAJOR FISHERIES

There is presented in this section of the Digest complete data on the catch of certain of the major species of fishery products taken commercially in the United States and Alaska. These data are included in the detailed catch tables for the various States but have been republished in individual fishery tables in this portion of the report. This has been done in order to provide readers with a single source of catch data for the halibut, mackerel, menhaden, pilchard, tuna, and whale fisheries. Most of these species are taken by fishermen operating in several States or districts, and a number are taken by several types of fishing gear. Because of this, the casual reader of the Digest often experiences difficulty in locating complete data on the catch of the species mentioned above. The information contained in this section includes the volume and value of the catch by individual types of gear, and by States or districts.

PACIFIC COAST HALIBUT FISHERY

The halibut fishery of the Pacific Coast, which is prosecuted by United States (including Alaskan) and Canadian fishing craft, ranks as one of the foremost fisheries of that section. During 1944, the total catch of halibut by craft of both nationalities amounted to 51,774,570 pounds, valued at $7,983,130 to the fishermen. This was a decrease of 1 percent in volume and 18 percent in value compared with 1943. Of the total catch in 1944, 73 percent was landed by United States craft and 27 percent by Canadian craft. Considered according to ports of landing, 22 percent was landed at Seattle, Washington, 37 percent at Canadian ports, and 41 percent at Alaskan ports.

The capture of halibut off the Pacific Coast of North America is regulated by the International Fisheries Commission, appointed under the treaty between the United States and Canada for the preservation of the North Pacific halibut fishery. The 1944 halibut season opened on April 16, but the Seattle fleet did not begin fishing until May 20 because of a price dispute. Halibut fishing in Areas I and II (South of Cape Spencer) closed on July 9. Halibut fishing in Areas III and IV (west of Cape Spencer) continued until November 30.

SECTION 11.- STATISTICAL SURVEY PROCEDURE

This report is another in a series of annual statistical reports containing data on the quantity and value of the commercial catch of fishery products and the numbers of persons and operating units engaged in the commercial fisheries of the United States and Alaska. The report has been prepared and published by the Division of Commercial Fisheries, Fish and Wildlife Service, Department of the Interior, and is a continuation of a series inaugurated by its predecessor organizations in the Departments of the Interior, Commerce, Commerce and Labor, and the United States Fish Commission.

In order that those who use the statistical data contained in this and previous reports of the Division may be informed as to the source of the figures and methods for their collection, it has been deemed advisable to outline, in moderate detail, the survey procedure followed. This procedure has been developed over a period of years, and changes in method have been made at times when such changes have appeared to work toward general improvement. While the surveys in the several sections are not made in the same manner, owing to varying facilities and records in different States, an attempt has been made to make the data collected by various methods in the producing areas comparable with respect to the same year as well as over a period of years. Throughout the entire plan it has been the intention to coordinate State and Federal fishery statistical work so that there will be as little duplication of effort as possible.

The procedure will be discussed under two main heads, "Sectional surveys" and "Local and special surveys".

SECTIONAL SURVEYS

Statistical surveys of the fisheries and fishery industries of the various sections of the United States occupy by far the greatest part of the time of the statistical personnel of the Division. In the course of these surveys, the field representatives visit the individual fishing localities of the various States to collect statistics on the volume and value of the catch of fish and shellfish, employment in the fisheries, quantity of fishing gear, number and classification of fishing and transporting craft, employment in wholesale and manufacturing establishments, and the volume and value of manufactured fishery products and byproducts. The various phases of these surveys are discussed in detail in the sections following.

History. —The first comprehensive statistical survey of the fisheries and fishery industries of the United States was made for the year 1880 by George Brown Goode, Assistant Director of the United States National Museum, and associates, with the cooperation of the Commissioner of Fisheries and the Superintendent of the Tenth Census. Data for specific fisheries, or restricted sections for years prior to 1880, also were collected in this early survey and recorded in Mr. Goode's reports. The survey for 1880, however, did not include the Mississippi River and tributaries. Periodic general surveys of a limited number of States or limited areas of the United States were made for various of the intervening years between 1880 and 1908 and from 1909 to 1928. In 1908 a survey of the entire United States, except the Mississippi River and its tributaries, was made. The next general survey of the entire United States was not made until 1931, although complete data for all sections, excluding the Mississippi River and tributaries, were collected for 1929 and 1930. Complete data on the catch and operating units for all sections, excluding the Mississippi River and its tributaries, were collected for 1932. In the latter survey, however, lack of sufficient funds prohibited collection of data on wholesale and manufacturing operations except those data collected as a part of the canned fishery products and byproducts survey. Complete canvasses for catch and operating units were made of the Pacific Coast States for the years 1933 to 1944, inclusive; the Chesapeake States for the years 1933 to 1942, inclusive, and 1944; the New England and Middle Atlantic States for 1933, 1935, for each year from 1937 to 1940, inclusive, and for 1942 to 1944, inclusive; and the South Atlantic, Gulf, and Lake States for 1934, and for the years 1936 to 1940, inclusive. Data on the wholesale and manufacturing industries were collected in all of the surveys from the years 1932 to 1940, but were not collected for the years 1941 to 1944, inclusive. In these years the lack of personnel precluded collection of data on wholesale and manufacturing firms except those data collected as a part of the canned fishery products and byproducts surveys. Complete data on the catch of the Lakes States also were collected for 1933, and 1935 and for the years 1941 to 1944, inclusive.

Following is a summary indicating the years for which statistics were collected on the fisheries and fishery industries in the various sections. Figures for the more recent years are available from the Service in bulletin form, but data for the earlier years are available only in the various printed reports of the Service. These reports are available for reference in the Department of the Interior library and at many public libraries.

In the New England States, statistics on the catch of the marine fisheries, and those conducted in the coastal rivers and bays of these States, were collected for the years 1880, 1887 to 1889, inclusive, 1898, 1902, 1905, 1908, 1919, 1924, 1928 to 1933, inclusive, 1935, 1937 to 1940, inclusive, and 1942 to 1944, inclusive. For most of these years data on operating units and wholesale and manufacturing trade also were collected. In addition to the above, partial statistical surveys were made for the entire section in 1892; the fisheries in Maine, New Hampshire, and Massachusetts for the fiscal year 1897; the lobster fishery for 1900 and 1913; the oyster fishery for 1910; the shad and alewife fisheries for 1896; the menhaden industry for 1912; the fisheries of Massachusetts for 1879; and the fisheries of Connecticut for 1925 and 1926.

Statistics on the catch of marine fisheries and those conducted in the coastal rivers and bays of the Middle Atlantic States were collected for the years 1880, 1887 to 1891, inclusive, 1897 and 1898, inclusive, 1901, 1904, 1908, 1921, 1926, 1929 through 1933, inclusive, 1935, 1937 to 1940, inclusive, and 1942 to 1944, inclusive. Data on operating units and wholesale and manufacturing trade also were collected for most of these years. In addition to these, a statistical survey was made of the coastal fisheries in these States in 1915; the catch in all States, except New York, in 1892; the shad and alewife fisheries in 1896; the shad fisheries of the Delaware River in 1910; the menhaden industry in 1912; the lobster fisheries in 1900 and 1913; and the oyster fishery in 1911. The years for which statistics are available on the shad fishery of the Hudson River are given in the section entitled "Shad and alewife fisheries".

In the Chesapeake Bay States, statistics on the catch of the marine fisheries and those conducted in the coastal rivers and bays of these States were collected for the years 1880, 1887 and 1888, 1890 and 1891, 1897, 1901, 1904, 1908, 1920, 1925, and for the years from 1929 to 1942, inclusive, and for 1944. Data on operating units and wholesale and manufacturing trade also were collected for most of these years. In addition to the above, a statistical survey was made of the crab fishery for 1915; the oyster fishery and menhaden industry for 1912; and the shad and alewife fisheries for 1896, 1909, and 1915. The years for which statistics of the shad and alewife fisheries of the Potomac River are available are given in the section entitled "Shad and alewife fisheries".

In the South Atlantic and Gulf States statistics on the catch of the marine fisheries and those conducted in the coastal rivers and bays of these States were collected for the years 1880, 1888 to 1890, inclusive, 1897, 1902, 1908, 1918, 1923, 1927 through 1932, 1934, and 1936 to 1940, inclusive. Data on operating units and wholesale and manufacturing trade also were collected for most of these years. In addition to the above, a statistical survey was made of the fisheries of these States, excluding Florida and Alabama, for 1887; the shad fishery of the South Atlantic States for 1910; the shad and alewife fisheries of the South Atlantic States for 1896; the sturgeon fishery of Florida for 1900; the menhaden industry of the South Atlantic States for 1912; the shrimp fishery for 1916; the oyster fishery of the South Atlantic States for 1910; and the oyster fishery of the Gulf States for 1911.

In the Pacific Coast States statistics on the catch of the marine fisheries and those conducted in the coastal rivers and bays of these States were collected for the years 1880, 1888, 1892, 1895, 1899, 1904, 1908, 1915, and for all of the years from 1922 to 1944, inclusive. These surveys have usually included data on operating units and wholesale and manufacturing trade. In addition to the above, statistics were obtained on the fisheries of California from 1918 to 1921, inclusive, and for the oyster fishery in 1912.

Statistics on the catch of the fisheries of the Great Lakes were collected for the years 1880, 1885, 1890, 1893, 1899, 1903, 1908, and for the years from 1913 to 1944, inclusive. Statistics of the operating units and of the wholesale and manufacturing trade were collected for most of the years for which canvasses were made from 1880 to 1908, inclusive, and in 1917 and 1922 as well as for most of the years from 1926 to 1942. In addition to the above, a survey was made of the fisheries of Lake Ontario and of certain fisheries in other lakes for the year 1897.

Statistics of the catch of the fisheries of the Mississippi River and its tributaries were collected for the years 1894, 1899, 1903, 1908, 1922, and 1931. In addition, figures have been obtained on the fisheries of Lakes Pepin and Koekuk for the years 1914 and 1917 and the years from 1927 to 1938, inclusive, and of the fisheries of the Mississippi River between Lakes Pepin and Keokuk for the years 1929 to 1938, inclusive.

Statistics also were collected on the fisheries of certain interior waters, other than the fisheries of the Great Lakes and the Mississippi River and its tributaries, for the years 1894, 1895, 1900 and 1902.

Field Personnel.—The statistics contained in this volume have been collected by a group of trained marketing specialists which comprises a part of the permanent staff of the Division of Commercial Fisheries of this Service.

Period Covered.—These specialists are assigned permanent field stations, generally in the principal port within their field, and travel from that station in conducting their various surveys. They collect statistics of fishery operations for the year preceeding that in which they are working; and since their field work occupies the greater part of the year, it is usually at least a year from the end of the calendar year for which they are collecting data until the figures are published. The data usually are collected and published on a calendar year basis, although for some States they are on a fiscal year basis. Prior to 1930, statistics on the catch of oysters in the Atlantic and Gulf States were collected for the oyster season; that is, from September to April, inclusive. Beginning with 1930 and continuing to the present time, they have been collected on the basis of the calendar year.

Scope.—The scope of the coastal statistical surveys include canvasses of the commercial fisheries of the oceans and bays and of the coastal rivers as far inland as commercial fishing is important. This usually coincides with the range of commercial fishing for anadramous species. Statistics of the fisheries of the Mississippi River cover canvasses of the fisheries of the Mississippi River proper as well as all of its tributaries wherein commercial fishing for either fish, crustaceans, or mollusks is prosecuted. Statistics of the fisheries of the Great Lakes cover canvasses of the fisheries prosecuted in the lakes proper, adjacent bays, the International Lakes of northern Minnesota, and rivers which sustain a commercial fishery having outlets into these waters. Statistics on the fisheries of Florida include the commercial fisheries prosecuted in Lake Okeechobee. Surveys for statistics of the wholesale and manufacturing fishery industries cover such plants located in the coastal, river, and lake areas adjacent to the waters mentioned above.

Methods of Collection.—Several methods for the collection of fishery statistics are employed, each of which has been carefully studied to obtain the best results with the available personnel and funds. In most instances the field personnel obtain lists of the names of fishing vessels, names and numbers of motorboats, and names of owners of these craft from local custom officials. Also it usually is possible to obtain the names of licensed commercial fishermen and some statistics on the catch from State fishery agencies; from other State, county or city sources; or from private organizations.

With such preliminary records as are available for their guidance the field specialists visit each fishing community in their field unless these preliminary records are so complete that personal visits may be eliminated. If complete catch data are not available from central sources, wholesale dealers and manufacturers of fishery products are visited and data are obtained from them on their purchases of fishery products. While it is impossible for the few Service representatives available for this work to interview each fishermen in a given locality, the more important ones are visited, and a sufficient number of those of lesser importance are interviewed to obtain reliable information on their production, the number of fishing craft employed, the quantity of gear operated, and the number of persons employed as fishermen.

In the Great Lakes and Pacific Coast States such exceptional cooperation has been obtained in recent years from the State fishery agencies in the collection of statistics that only fragmentary surveys need be made by the Services specialists to obtain other necessary data. Also the State fishery agencies in Maine, New York, and Maryland more recently have developed very complete statistical systems which greatly facilitate the Services' surveys in these States

As regards the fisheries of the Great Lakes and International lakes of Northern Minnesota, the Service obtains most of the catch statistics and usually the value of the catch direct from the records of the State fishery agencies. To obtain data on the number of fishermen, boats, vessels, and gear, the Service conducts such personal surveys among the fishermen as may be necessary to supplement the State records.

Service statistical personnel are stationed at Seattle, Wash., and San Pedro, Calif., who survey the fisheries of the Pacific Coast States. As a rule they obtain figures on the volume of the catch from the records of the State fishery departments. The value of the catch is derived from dealers' records. In Washington and Oregon, the offshore fisheries are surveyed separately by the Service to obtain data on the number of operating units. Statistics of the wholesale fishery industry for this section are obtained largely by personal interviews.

In the administration of the Alaska fisheries the Service obtains sworn statements concerning the activities of those prosecuting the fisheries in this area. These statements are compiled by the Alaska Division of this Service and the summary data, by districts, are reproduced in this report.

Statistics on the volume of the catch of fish of the Great Lakes States usually are shown in weights as landed, which may be in the round or dressed condition. Statistics on the volume of the catch of fish taken in the remainder of the United States are shown in round weight.

The figures in the tables for shellfish represent the weight of the meats in the cases of univalve and bivalve mollusks and gastrapods, and the round weight of crustaceans and such mollusks as squid and octopus.

Shore and vessel fisheries.—In general, statistics of the shore fisheries, as collected by the Services' representatives, include data on the number of casual and regular fishermen; number of motor and other fishing boats and accessory boats; type and quantity of gear used; and the volume, value, and method of capture of each species caught by boats (for our purpose craft of less than 5 net tons capacity are called "boats") for each locality or group of localities This method is not followed in some sections where the availability of data collected by the States fishery agencies obviates the necessity of detailed locality surveys.

Statistics of the vessel fisheries include data on the number of the crew, rig of vessels, net tonnage, kind and quantity of gear used, accessory boats carried, and volume, value, and method of capture of each species. For our purpose craft of 5 net tons capacity or more are called "vessels". As in the shore fisheries, the availability of figures collected by State fishery agencies may eliminate the necessity of our agents collecting these data for individual vessels.

Statistics of the quantity of gear operated indicate the maximum number of units fished at any one time during the year. Gear carried in reserve for replacement is not enumerated.

All persons engaged in commercial fishing operations are included as fishermen. For our purpose these have been divided into "regular" and "casual" fishermen. Regular fishermen are defined as those who receive more than one-half of their annual income from fishing; whereas casual fishermen are those whose principal business is something other than fishing, and who receive less than one-half of their annual compensation from fishing.

The catch of fish and shellfish is credited to the port where it is landed and the craft making the catch is credited to the locality where it landed the greatest portion of its catch during the year. Prior to the survey for 1942 it was the practice of the Service to credit the entire catch of a vessel to the principal port of landing, regardless of the actual point of landing. This policy was discontinued, however, since it quite often resulted in inconsistencies by presenting catches of certain fish in areas to which they are not common inasmuch as fishing vessels frequently operate in areas far removed from their principal fishing port. An outstanding example ot this is the case of the Southern trawl fishery. In this fishery off the New Jersey, Maryland, Virginia, and North Carolina coasts, many fishing vessels from Massachusetts operate for 6 to 10 weeks during the winter season. Prior to the survey for 1942 the catch of these fish, principally common to these waters, was credited to Massachusetts. Under the present system the catch is credited to the southern port at which it was landed and the vessel, crew, and gear are credited to the port at which the major portion of their catch was landed.

Wholesale and Manufacturing Trade.—All persons or firms engaged in the wholesale buying and selling of fishery products or who produce manufactured fishery products are surveyed under this title. Where the business of fishing and wholesaling or manufacturing is combined, that part of the business devoted to either of the latter two phases is included in the wholesale and manufacturing survey and the part devoted to fishing is included in the shore or vessel fisheries. If a wholesale business is conducted with no manufacturing and the business is so small that the full time of one man over the whole year or season is not required, it is then disregarded as a wholesale business. If commodities other than fishery products are handled, the persons engaged, and salaries and wages paid, are prorated; and only that part concerned with fishery products is included. If such a firm required less than the full time of one man over the whole year or season and if it does not manufacture, it is not included in the canvass. Retail firms that manufacture, or whose wholesale business exceeds the retail part, are included. Persons or firms engaged in the motor trucking of fishery products are included as wholesalers if they are engaged in wholesale buying and selling.

Buyers for a central firm are not canvassed as wholesale dealers unless they ship direct to the firms customers from the buying point.

Fishermen or fishing concerns, except manufacturers, who do not buy fishery products are not included under this heading except that oyster-shucking firms are included provided shuckers are employed, irrespective of whether all or part of the oysters used are taken from the firms' privately owned beds.

Manufactoring concerns include those which prepare packaged fishery products; salted; spiced; smoked; dried, or otherwise cured fishery products; canned fishery products; or fishery byproducts.

Fishermen who manufacture are surveyed to obtain the number of persons employed and the volume and value of the products prepared.

In collecting statistics of manufacturing firms, Service representatives obtain data on the production for each plant in the areas surveyed. Such products are usually "final" and in form for consumption; however, the products may be "intermediate" and require further processing before reaching the consumer markets. An outstanding example of an intermediate product is green-salted groundfish, which almost invariably is further processed before final marketing. In reviewing the statistics of manufactured products it should be observed that intermediate products are not shown if they are prepared to the final stage in the original plant. An exception to this rule, however, is in the case of the production of mild-cured salmon, which, on account of its importance, is shown in its entirety, whether further processed in the producing plant or not. In this connection it should also be stated that several of the byproducts for which statistics are shown may be intermediate, and the plants producing the final products are not surveyed by this Service. Outstanding among such products are marine-animal oils, scrap, and meal.

Statistics of persons engaged in wholesale and manufacturing establishments are reported in three groups; proprietors, salaried employees, and wage earners. Proprietors represent those persons who devote their time to the conduct of the enterprise and receive their compensation in the form of profits. Managers of branch houses are not classified as proprietors. Salaried employees usually include those persons paid by the week or month, while wage earners usually consist of those paid on a per diem or piecework basis. This, however, is not true in all cases, since the distinction between these two groups depends primarily upon the character of the work done rather than the unit of time employed for calculating rates of pay. In general, office employees are classified as salaried employees. Plant foremen or superintendents are classified as salaried employees unless they are principally engaged in manual labor, in which case they are classified as wage earners. Other employees, including plant workmen, usually are classed as wage earners. Active officers of corporations are classified as salaried employees. Statistics of wage earners are shown in two forms; the average number employed during the operating season; and the average number employed during the year (the monthly average for the year).

Transporting Trade.—Statistics are obtained on the number of the crew and number of boats and vessels engaged in transporting fishery products from the fishing grounds to port, or from port to port. However, if a craft is engaged in catching fish at any time of the year it is included as a fishing craft rather than as a transporter.

Publication of Data.—Statistics of employment in the fisheries, craft and gear engaged, catch and value of catch, and certain data on industries related to the fisheries are summarized according to geographic division and published in bulletin form as soon as possible after the completion of each survey. Later the figures in more detail are included in the annual reports of the Division.

Prior to 1939, data on catch by counties and operating units by counties were included in this report. Although the statistics are still collected on this basis, as well as by the waters in which the catches were made, it has not been possible since 1939 to release this material in printed form due to insufficient printing funds. The data, however, are on file in the Washington office and are, in most instances, tabulated for use in answering specific requests. It is planned to resume publication of data on catch by counties and operating units by counties when this becomes possible.

LOCAL AND SPECIAL SURVEYS

Landings at Certain Important United States Ports.—Statistics of the landings of aquatic products at Boston and Gloucester, Mass., and Portland, Maine, are obtained in a manner similar to that used in the general canvasses with the exception that an agent is permanently stationed at each of these ports. Their duties include the obtaining of figures daily on the quantity of fish landed by each fishing vessel, the value of such fish landed, information concerning the date of departure and arrival of the vessel, as well as indicating, as a result of personal interviews with the vessel captain, the grounds from which the fish were taken and the gear used in their capture. These data are forwarded to the Washington office where compilations are made. Statistics of these landings are released monthly and annually in bulletin form and detailed data are published in the annual reports of this Division. Products of American fisheries received duty free at Boston and Gloucester, Mass., and Portland, Maine, from the treaty coasts of Newfoundland, Magdalen Islands, and Labrador, have not been included in the landings at these ports since 1938. Data on the landings at Boston and Gloucester, Mass., have been collected annually since 1893, and those for Portland, Maine, since June 1915. Some data are available for Boston and Gloucester prior to 1893.

Landings at New Bedford, Mass.,.—Statistics on the landings at New Bedford, Mass., for 1944 were collected by the Service representatives at that port and forwarded to the Washington office for tabulation. The data were released in an annual bulletin and are included in this report. Statistics of the landings at New Bedford have been collected for each of the years following 1937.

Statistics of the Landings of Fish at Seattle, Washington.—Data on the landings by the United States halibut fleet at this port are collected by the Service's representative in that city. The halibut fleet is generally classified as those vessels belonging to members of the Fishing Vessel Owners Association, Inc., selling their fares through the Seattle Fish Exchange. This fleet originally fished almost exclusively for halibut. With the shortening of the halibut season, particularly in Area II, a number of these vessels have fished for other species during the halibut closed season and continued selling their fish through the Exchange. Data on fishery products received by Seattle wholesale dealers are also collected by the Service's Seattle representative. Landings by the halibut fleet are included in these receipts, but receipts from Alaska and British Columbia are not included. Statistics of these landings and receipts are released monthly by the Seattle office of the Division of Commercial Fisheries. Statistics of the landings by vessels at Seattle have been collected since June 1915 and certain data on products received by Seattle wholesale dealers since December 1915.

Shad and Alewife fisheries.—Owing to the importance of the Hudson and Potomac Rivers in the production of shad, surveys for statistics of the catch, value of the catch, and operating units are made annually. On the Potomac River similar statistics also are obtained for the alewife fishery. Much of the data required for these surveys are available from the State fishery agencies.

Statistics of the shad and alewife fisheries are not published separately in bulletin form, but a summary of the years activities is published in the annual reports of the Division.

Statistics of the shad fishery of the Hudson River are available for 1896, 1897, 1898, 1901, 1904, 1910, and from 1915 to 1944, inclusive, while data for the shad fishery of the Potomac River are available for 1896, 1901, 1904, 1909, 1915 and from 1919 to 1942, inclusive. Statistics of the alewife fishery of the Potomac River are available for 1896, 1909, 1915, and from 1919 to 1942, inclusive, and 1944.

Pacific Halibut Fishery.—Statistics of the Pacific halibut fishery are obtained by the Service's personnel in Seattle, aided by Service representatives in Alaska and the International Fisheries Commission. The fleet classification has been arbitrarily applied by including in the "Washington fleet" all United States and Alaska vessels that land more than half of their catch in that State. All other United States and Alaska vessels of the halibut fleet are included in the "Alaska fleet". Monthly and annual statistical bulletins are available on this fishery, being published along with the statistics of the landings of fishery products at Seattle, Wash., and detailed statistics are published in the annual reports of the Division. Statistics of the landings of halibut at Pacific coast ports have been collected since 1925.

Canned Fishery Products and Byproducts.—Beginning in 1921, the Service has made annual surveys for statistics of the canned fishery products and byproducts industries of every section. These are begun the first week in January of each year for statistics of the production in the preceding year. The Service obtains by mail, so far as possible, the production of canned fishery products or byproducts from each plant in the United States engaged in this business. Where it is impossible to obtain reports by mail the report is obtained by personal visit by the Service's agents. They obtain statistics of the production and value of the production for each commodity by can sizes, case sizes, and trade classifications. The value shown for canned products constitutes the gross amount received by the packer at the production point, no deductions being made for commission or expenses. Statistics of the canned fishery products and byproducts produced in Alaska are received on the same statements obtained by the Alaska Division that include statistics of general fishery operations.

Annual statistical bulletins are issued on this trade, and detailed statistics of the output are published in the annual reports of the Division. In addition to the data obtained on the output of these products annually since 1921, data also usually were obtained prior to 1921 for the years the various sections were surveyed.

Packaged Fish Trade.—Statistics of the annual production and value of fish packaged in the United States are obtained as a part of the survey for the statistics of the canned fishery products and byproducts industries. These data are released in bulletin form annually and later in more detailed and adjusted form in the annual reports of the Division. Statistics of the production of packaged fish are available for 1926 and the years 1928 to 1944 inclusive.

Cold-Storage Holdings of Fish.—An arrangement has been made with the Department of Agriculture whereby statistics of the cold-storage holdings of the various species of fish and shellfish, by sections of the United States are furnished to this Service monthly. Data also are supplied on the quantity of the various species of fish frozen and the holdings of certain cured fish. Bulletins showing these statistics are issued monthly as well as annually.

Detailed cold-storage statistics also are published in the annual Statistical Digests issued by the Division. Statistics of cold-storage holdings of fishery products have been published since 1917 and data on quantities of fish frozen, for the years from 1920 to 1925, inclusive, and from 1928 to 1944, inclusive.

Sponge Market, Tarpon Springs.—A large proportion of the total output of sponges in Florida is sold on the sponge exchange at Tarpon Springs. In view of this, the Service has obtained from a representative of the exchange annual statistics of the quantity and value of the sponges, by variety classifications, handled through it annually. Statistics of the quantity of sponges marketed by the exchange are published in bulletin form, and a summary of the year's activities is published in the annual reports of the Division. Statistics of the transactions on the sponge exchange are available for 1913, 1914, and for the years from 1917 to 1944, inclusive.

Foreign Fishery Trade.—Statistics of the foreign fishery trade are obtained from compilations made by the Bureau of the Census, Department of Commerce. Statistics of all known fishery products imported or exported have been assembled in one table and published annually in the reports of the Division in recent years. For earlier years they are available in the reports of the Bureau of the Census, Bureau of Foreign and Domestic Commerce, the Bureau of Statistics, the Department of Commerce and Labor, or the Treasury Department.

PRACTICES AND TERMS

Certain practices and terms of importance used in the compilation of fishery statistics are explained below.

Days Absent.—In computing "days absent" for vessels landing fares at the various ports, the day of arrival but not the day of departure are included; thus a vessel leaving port on the 8th of the month and returning on the 15th of the month will be shown as being absent 7 days.

Operating Units.—Operating units as referred to in this document include persons engaged in the fisheries, and craft and gear employed in the fisheries.

Vessel.—The term "vessel" refers to a craft having a capacity of 5 net tons or more.

Boat.—The term "boat" refers to a craft having a capacity of less than 5 net tons.

Incidental Catch.—The term "incidental catch" refers to the catch of certain species by a type of gear which ordinarily does not capture such species.

Percentages.—Percentages are usually shown as whole numbers. Fractions of percents are dropped if less than five-tenths, and the percentage is raised to the next higher integer if the fraction is greater than five-tenths. If the fraction is exactly five-tenths, the integer is raised or lowered to make it an even number.

Converting.—Many of the figures shown in the statistical tables published herewith have been converted to thousands of pounds or dollars. In making these conversions the largest number from which a group of items is computed is raised or lowered to the nearest thousands place. The individual items are adjusted to conform to the total thus obtained.

Confidential Data.—The statistical data collected by the Division are confidential and are not released except in published form or upon approval of the Washington office. Statistics of production of wholesale and manufacturing firms are published only for commodities or geographical areas where the production of three or more concerns may be grouped. Every effort is made to publish only those figures which will not reveal individual enterprise.

CONVERSION FACTORS

It is the policy of the Service to show detailed catch figures of all products in pounds for the sake of uniformity and for purposes of comparison. This presents little difficulty in the case of fish since in very rare instances are fish reported in units of measure other than pounds. For shellfish, however, the units of measure may be bushels, sacks, barrels, thousands of shellfish, gallons of meats, etc. These many units make standardization difficult, and when combined with the wide variation in the requirements or definitions of some of these units in the various States the problem becomes even more complex.

All bivalve mollusks are reported in pounds of meats in the detailed catch tables presented in this report. In addition, there are included supplementary tables for most of the sections, which give data on the production in bushels. These supplementary tables also give the production of certain other shellfish, such as crabs, in number.

Oysters.—Probably the greatest problem in the presentation of fishery statistics in uniform units of measure is in the case of oysters. Usually the production of oysters on the Atlantic and Gulf coasts is reported to Service personnel in bushels; and prior to the data obtained for the year 1930 conversion from bushels to pounds of meats was effected on the basis of a uniform yield of 7 pounds of meats to the bushel. However, investigations have shown considerable variation from this figure. There follows a table which gives the measures used for oysters in the various States and the average yields per bushel. The statistical tables in this report are based on these average yields.

Other Conversion Factors.—The principal other conversion factors that have been used in this report are as follows.

Crabs, blue, soft and peelers:

To convert number of crabs to weight in pounds in New Jersey, Delaware, Maryland, Virginia, South Carolina, and Florida, divide by 4; in North Carolina, divide by 5; in Mississippi, divide by 3; and in Louisiana, divide by 2.89.

Crabs, blue, hard:

In Rhode Island, divide by 4.3; in New York, New Jersey, Delaware, Maryland, and Virginia, divide by 3; in North Carolina, South Carolina, and Georgia, divide by 2; in Florida, divide by 2.01; in Alabama, divide by 2.4; in Mississippi, divide by 2.09; in Louisiana, divide by 2.07; and in Texas, divide by 2.11.

Crabs, rock:

In Maine, New Hampshire and New Jersey, divide by 3; in Massachusetts, divide by 4; and in Rhode Island, divide by 3.22.

Crabs, stone:

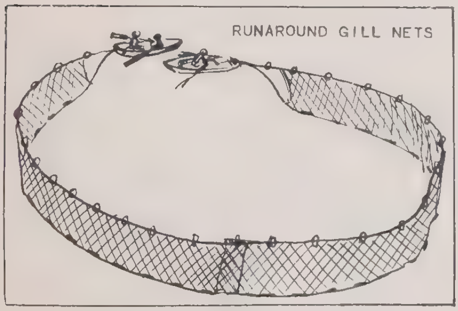
In all States divide by 1.04.

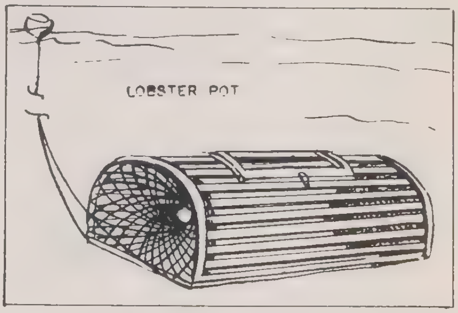
Crabs, horseshoe:

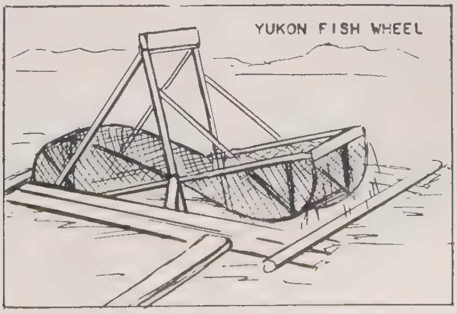
In all States multiply by 3

Sponges, dried:

In Florida, convert number of bunches to weight in pounds as follows: large wool, multiply by 11; small wool, multiply by 6; wool rags, multiply by 4.82; yellow, multiply by 3; and grass, multiply by 4.







SECTION 12.- GLOSSARY OF NAMES OF FISHERY PRODUCTS

In order to prevent misunderstanding in the use of common names employed in the tables and discussions, the following list of common and scientific names is given.

COMMON NAMES AS SHOWN IN SERVICE REPORTS	OTHER COMMON NAMES	SCIENTIFIC NAMES
ALEWIFE	BRANCH HERRING, WALL-EYED OR BIG-EYED HERRING.	POMOLOBUS PSEUDOHARENGUS.
	BLUEBACK, GLUT HERRING	POMOLOBUS AESTIVALIS.
AMBERJACK		SERIOLA SPECIES.
ANCHOVY		ENGRAULIS MORDAX. ANCHOVIELLA DELICATISSIMA. ANCHOVIELLA COMPRESSA.
ANGELFISH		POMACANTHUS SPECIES HOLACANTHUS SPECIES
BARRACUDA		SPHYRAENA ARGENTEA.
BLACK BASS	SMALLMOUTH BASS	MICROPTERUS DOLOMIEU.
	LARGEMOUTH BASS	MICROPTERUS SALMOIDES
BLUEFISH	TAILOR, SKIPJACK	POMATOMUS SALTATRIX
BLUE PIKE	PIKE PERCH, BLUE PICKEREL (CANADA)	STIZOSTEDION VITREUM GLAUCUM.
BLUE RUNNER OR HARDTAIL	RUNNER	CARANX CRYSOS.
BONITO		SARDA SARDA. SARDA CHILIENSIS.
BOWFIN	FRESH-WATER DOGFISH	AMIA CALVA.
BUFFALOFISH		ICTIOBUS SPECIES.
BURBOT	LAWYER, LING	LOTA MACULOSA.
BUTTERFISH		PORONOTUS TRIACANTHUS.
CABIO	COALFISH, CRAB EATER, COBIA	RACHYCENTRON CANADUS.
CABRILLA	ROCK BASS	EPINEPHELUS ANALOGUS (PACIFIC COAST)
CARP	GERMAN CARP	CYPRINUS CARPIO.
CATFISH AND BULLHEADS		AMEIURUS SPECIES. ICTALURUS SPECIES. LEPTOPS OLIVARIS.
CERO	PAINTED MACKEREL, KINGFISH	SCOMBEROMORUS REGALIS.
CHUB	TULLIBEE IN CANADA; LONGJAW, BLUEFIN, BLACKFIN IN UNITED STATES	ALL LEUCHICHTHYS EXCEPT ARTEDI (IN GREAT LAKES).
CIGARFISH	SCAD	DECAPTERUS PUNCTATUS.
CISCO	HERRING IN CANADA	LEUCICHTHYS ARTEDI (LAKE ERIE ONLY)
COD	CODFISH	GADUS MACROCEPHALUS (PACIFIC COAST). GADUS CALLARIAS (ATLANTIC COAST).
CRAPPIE	WHITE CRAPPIE	POMOXIS ANNULARIS.
	BLACK CRAPPIE, STRAWBERRY BASS, CALICO BASS	POMOXIS SPAROIDES.
CREVALLE	JACK	CARANX HIPPOS.
CROAKER	CROCUS, HARDHEAD	MICROPOGON UNDULATUS.
CUNNER	CHOGSET, BLUE PERCH, BERGALL	TAUTOGOLABRUS ADSPERSUS.
CUSK		BROSME BROSME.
DOLLY VARDEN TROUT	SALMON TROUT, BULL TROUT	SALVELINUS MALMA.
DOLPHINFISH		CORYPHAENA HIPPURUS.
DRUM:		
BLACK	OYSTER CRACKER	POGONIAS CROMIS.
RED	CHANNEL BASS, REDFISH, SPOTTED BASS	SCIAENOPS OCELLATUS.

SECTION 13. - PICTORIAL SECTION

As many of the readers of this publication may not be familiar with all of the species of fish and shellfish, etc., taken commercially in the United States and Alaska, illustrations of many of the various species are included in the following pages. The descriptive material appearing with each species includes the areas in which they are taken commercially and does not constitute the extreme limits in which they occur. Similarly, the gear listed for each species do not represent the only types of apparatus by which these species are obtained, but represent those types of apparatus which are normally used in their capture. The gear do not necessarily appear in the order of their importance.

For more detailed information on the nomenclature of the fishery products listed below, the reader is referred to Section 12 of this publication entitled, "Glossary of Names of Fishery Products" which appears on Page 220.
